

PRODUCT INFORMATION

The Landmark Vertical retaining wall system represents a breakthrough in reinforced wall engineering. Combining innovative thinking with time-tested engineering principles, Anchor Wall Systems has developed the next-generation vertical segmental retaining wall system.

The Landmark Vertical components are designed to work in conjunction with geosynthetic reinforcement and lock bars to create tall walls capable of withstanding extreme loading conditions. This system creates a mechanical connection between the block and geosynthetic reinforcement.

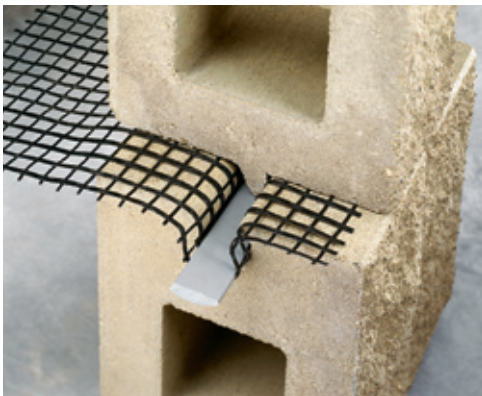

- Available in two different front-to-back dimensions to permit construction of wall faces with unique shadow textures
- Evaluated by the Highway Innovative Technology Evaluation Center in the United States, the Roads and Traffic Authority in Australia and the British Board of Agrément in the United Kingdom
- Minimum outside radius, measured on the top course to the front of the units: 6 feet
- Minimum inside radius, measured on the base course to the front of the units: 9 feet
